The Opportunity

Inhabit is an innovative consulting group exclusively focused on providing specialist engineering services with offices across the globe (www.inhabitgroup.com).

- Join an innovative global architectural engineering consulting practice
- Opportunities exist to undertake both local and international projects
- Thrive in an open and collaborative working environment

An opportunity has arisen to appoint an Acoustic Engineer with a minimum of 5 years' local experience in the building and acoustic environment, to work and manage a wide range of projects across diverse sectors.

The Role

- Manage the delivery of acoustic projects and ensure project commitments are met
- Provide acoustic design advice in accordance with relevant standards, codes and guidelines
- Develop strong client relationships and create opportunities for business growth
- Undertake acoustic calculations and modelling tasks using industry software, instrumentation and specific tools
- Deliver building acoustics and noise / vibration impact assessment reports
- Perform onsite noise and vibration measurements and testing
- Attend project meetings (internal and external)

Skills and Experience

- A degree qualification in Mechanical Engineering, Acoustics Engineering, or closely related field
- 5 years' minimum experience in acoustic assessment, noise and vibration measurement, preferably within a consulting environment
- An strong understanding of noise assessments and/or Acoustic Control principals
- Self-motivated, dedicated and proactive with a passion for detail
- Demonstrated excellence in providing high quality client service
- Ability to organise and prioritise workflow
- An aptitude for solving problems in innovative ways
